June Brings Visual Progress

Steel got erected at MISTRAS. Concrete got tilted for Southgate. Earth got moved at International Drive. Cubicles got assembled at AFMETCAL. Asphalt got formed at Aerospace Drive. Keys got turned over to Ariel. Pipe got laid at the 20K spec building. June brought a flurry of construction activity to the Aerospace Center campus as every one of the seven major construction projects here saw visual progress.

Facebook has proven to be the place where progress takes the visual form.

June Brings May Flowers

A harsh winter brought those May flowers a little late, but the flowers are now out at the Ohio-Native Meadow, located off the walking path on the Base Campus of the Aerospace Center. What a sight!

It's as rare to find a gem like this at an industrial park as it is rare to find a combination that is both ecologically-friendly and economically-friendly. The meadow means less mowing (only once a year), but yields a park-like setting in the shadow of the largest building on the Base Campus.

June Brings New App

Developed with in-house resources and finished by our techs with some visually-attractive icons, the Aerospace Center app is now available. It's a smart phone version of the Port Authority's Message Center, geared toward on-site personnel with quick ways to reach the Port Authority staff, on-site weather, on-site camera, and quick views of social media platforms without having to have an account. It's available in iPhone and Android platforms searching for "Aerospace Center."
