17-Year Cicadas Will Notice Change

Let's have a little fun. The Port Authority Facebook page will track the re-emergence of the 17-year cicadas to Central and Eastern Ohio. A lot has changed since the cicadas last visited.

Since the last time these critters visited our campus, over 375,000 s.f. of new building space has been built on the campus. The access drive for Kaiser Aluminum was still an access drive in 1999, but now, as a public street, houses industrial operations for Samuel, xperion, MISTRAS Group, and Ariel Corporation.

In fact, personnel on the campus can visit the Ohio Native Meadow to have their best chance to witness the cicada visitors. That's another place that wasn't here the last time they came around.

Capital Projects Poised to Start

Over \$1 million worth of capital projects are getting underway on the Port Authority's Base Campus of the Aerospace Center.

Upgrades to the facades at the main entrances to the Boeing Building will be the most visible

of a project list that includes demolition and site redevelopment of the former Metrology Building, completion of the loop road and new visitor parking lot, and a major roof replacement.

International Presence Key

The available building space at the Aerospace Center has proven to be a magnet for investment by companies from around the World. At least one of every three looks at our available buildings and sites is from potential foreign investors.

The Port Authority admin building proudly flies German and Canadian flags alongside our own Stars and Stripes. Toronto-headquartered Samuel and Sons' Samuel Strapping Systems has been here since 2007. xperion, whose parent company is headquartered in Herford, Germany, broke ground in 2013. Firefly Diagnostics out of Toronto leased clean room space in late 2014 for a precision medicine start-up operation.
